PROFILE

Technical product manager and builder with a software engineering background, computer vision research experience, and hands-on ownership of AI-powered B2B products from zero to production. Built and shipped agentic product experiences integrating multiple LLM providers, designed enterprise integration architectures across 28+ external services, and configured observability systems (Splunk) across 27+ exception scenarios within a regulated enterprise environment. Comfortable prototyping, shipping features hands-on alongside engineering, running customer-facing conversations that speak credibly to value and technical trade-offs, and leveraging AI heavily to accelerate every aspect of product work. Founder mentality: built a live platform from zero with no team, no playbook, and no external direction, reaching 948 weekly active users. PSPO I certified (93.8%). MEng Engineering Management (First Class, 79.6% GPA). BEng Software Engineering (thesis: semantic segmentation, deep learning, computer vision).

EXPERIENCE

Product Owner | Watt Footprint | Dublin, Ireland

Jul 2025 – Dec 2025

- Owned roadmap and delivery for a multi-site enterprise B2B platform serving 55 accounts across Ireland, UK, and UAE, working directly with large enterprise customers to prototype, iterate, and deploy operational intelligence features across 20+ API endpoints and 7 product areas.
- Ran customer-facing conversations with enterprise stakeholders (CEO, CRO, Head of Operations), speaking credibly to value and technical trade-offs, onboarding 13 enterprise clients end to end and delivering €800k to €1M+ in customer value with 100% retention.
- Shipped an AI-powered feature (AWS Textract, OpenAI) from prototype through two production releases, defining evaluation criteria for accuracy, identifying failure modes across edge cases, and iterating based on real customer usage until it became the operational default.
- Defined success metrics and built observability from scratch using Amplitude, establishing baselines and using data to drive continuous improvement, achieving 84% session growth and 2,700% growth in domain-critical conversion events.
- Coordinated delivery across a cross-functional team of 9 plus an external squad of 4 (2 engineers, QA, UX designer), acting with urgency to unblock delivery and resolve issues before they impacted customer outcomes.
- Conducted on-site visits to enterprise client locations (including Whelehans Wines) to identify operational and setup issues first-hand, working alongside electricians during IoT hardware installation and configuration, and providing direct customer support through calls and on-site troubleshooting, developing genuine comfort with physical site operations alongside digital product work.

Product Manager | Speir Ltd | Athlone, Ireland

Sep 2024 – Jun 2025

- Owned the roadmap and day-to-day delivery for an AI-native B2B platform from zero to production, designing and shipping agentic workflows that orchestrated 28+ external services across LLM providers (OpenAI, Anthropic, Groq, Cohere), vector search, and retrieval pipelines to power intelligent, scalable product experiences.
- Got hands-on: built prototypes, defined API specifications (REST, gRPC), and worked directly with engineering to ship features end to end, making architecture trade-off decisions between latency, cost, and response quality across multiple AI providers.
- Worked directly with enterprise customers, running discovery calls, gathering feedback, and speaking credibly to both value and technical trade-offs, translating customer challenges into shipped product across 16 enterprise studios, 108 trainers, and 448 end user clients.
- Designed enterprise integration requirements and interoperability across payment systems (Stripe), authentication (Firebase), and AI service providers, ensuring scalable, well-documented integrations that downstream teams could build on.
- Leveraged AI heavily to accelerate personal and team workflow: used Claude and GPT daily for research, specification writing, competitive analysis, and documentation, treating AI as a core productivity multiplier rather than an occasional tool.

Software Engineer | Mastercard | Dublin, Ireland

Jun 2022 – Jan 2023

- Built event-driven payment processing systems (Kafka, Spring Boot, PostgreSQL) on Mastercard's NEXUS edge computing network, developing hands-on software development experience directly applicable to prototyping and shipping alongside engineering teams.
- Configured Splunk observability across 27+ exception scenarios for real-time transaction monitoring, developing direct experience with observability tooling and proactive issue detection within a large-scale enterprise infrastructure environment.
- Worked with large enterprise customers across 300+ merchant implementations, developing experience operating within complex, multi-site enterprise environments at scale.

Business Process Executive | Infosys BPM (EE Telecom) | Dublin, Ireland

Jan 2022 – May 2022

- Identified operational bottlenecks and shipped structured improvements, delivering a 25% throughput increase and raising NPS to 70% through high-agency, customer-first problem-solving.

PROJECTS

Visajobs Ireland - Founder, Product Manager - 0-to-1

Jan 2026 – Present

- Built a live platform from zero with no team, no playbook, and no external direction: data pipeline, AI-powered features (cover letter and resume generation using Anthropic tool-use with schema-enforced structured output), infrastructure (migrated from Vercel to self-managed AWS EC2/Docker with zero-downtime cutover), and production incident response.
- Diagnosed and resolved a cascading production outage (SSH lockout, OOM crash, instance freeze) under time pressure, audited and repaired a 9-job automated data pipeline, and conducted a full security audit (JWT, IDOR, CSRF, privilege escalation). 948 weekly active users. visajobs.ie.

Semantic Segmentation (BEng Thesis - Python, Computer Vision)

2021

- Completed a BEng thesis on semantic segmentation: trained and evaluated deep learning models for pixel-level image classification, working with image datasets, model architectures, training pipelines, and evaluation metrics (IoU, pixel accuracy), developing hands-on computer vision and deep learning experience.

EDUCATION

MEng Engineering Management Technological University of the Shannon	2024
First Class Honours, 79.6% GPA. Modules: Data Analytics, Strategic Management, Quality Management, Financial Statement Analysis.	
BEng Software Engineering Technological University of the Shannon	2021
Thesis: Semantic Segmentation (Deep Learning, Computer Vision).	

CERTIFICATIONS

Professional Scrum Product Owner I (PSPO I) | Scrum.org | March 2026 | Score: 93.8%

SKILLS

AI & Agentic Product: LLM Orchestration (OpenAI, Anthropic, Groq, Cohere), RAG, Agentic B2B Workflows, Evaluation Design, Structured Output (Tool-use), Prompt Engineering, AI-native Workflow Acceleration

Computer Vision & ML: Semantic Segmentation, Deep Learning, Model Training & Evaluation, Image Classification, IoU/Pixel Accuracy Metrics

Enterprise Integrations & Observability: 28+ Service Integrations, REST/gRPC API Design, Splunk (27+ Exception Scenarios), Enterprise Interoperability, Multi-site Deployment

Builder & Founder Mindset: 0-to-1 Product Ownership, Hands-on Prototyping, Infrastructure Ownership, Production Incident Response, Security Auditing (JWT, IDOR, CSRF)

Customer-facing & Delivery: Enterprise Customer Conversations, Value & Trade-off Communication, Agile/Scrum, Jira, Confluence, Figma, Cross-functional Team Coordination
