PROFILE

Product Manager with 3+ years owning products end to end, from discovery and backlog through launch, adoption and measured outcomes. Builds multi-tenant B2B SaaS and data platforms, ships AI into production with human review and the judgement to pull it when it does not work, and takes enterprise clients live across multiple markets and regulatory regimes. Software engineering background from Mastercard means architecture, API and data conversations with engineers are direct rather than translated. BEng Software Engineering, MEng Engineering Management (First Class Honours), PSPO I certified (93.8%).

EXPERIENCE

Product Manager | VisaJobs Ireland | Remote — Jan 2026 - Present

- Own product direction and the backlog for a two-sided platform spanning a public site, API, admin console, employer portal and Chrome extension, built on 216,000+ government permit records and 23,000+ company profiles.
- Grew the product to 7,500+ registered users and 4.9K monthly actives with zero paid acquisition, shipping 43 feature releases with 2 engineers and prioritising from retention cohorts and engagement data.
- Chose accuracy over engagement by replacing inferred sponsorship labels with an explicit evidence model that makes uncertainty visible, so users can trust and act on what they see.
- Shipped agentic AI into production with schema-enforced structured output and human-in-the-loop review on sensitive records, after fragile LLM parsing caused intermittent failures.

Product Owner | Watt Footprint | Dublin, Ireland — Jul 2025 - Dec 2025

- Owned the roadmap and backlog across web and mobile for a multi-tenant enterprise SaaS platform with 20+ API endpoints across 7 product areas, leading a squad across two parallel backlogs with an internal team and an external squad of 4.
- Enabled EUR 800k to 1M+ in delivered customer value across 13 enterprise accounts, growing platform engagement 3x to 27x as clients moved from pilot usage to full operational use.
- Delivered Bill Reader v2 and v3, an AI extraction and validation capability using AWS Textract and OpenAI, setting accuracy thresholds (95% PDF, 80% image) as acceptance criteria and cutting processing time by 80%.
- Led onboarding and go-live for the first UK and UAE enterprise clients across EUR, GBP and AED billing, coordinating engineering, operations and sales on integration readiness, GDPR and data residency, with 100% logo retention.
- Defined KPIs in Amplitude and built dashboards for the Head of Operations and CRO (stickiness 13% to 16%, 84% session growth), presenting performance and roadmap recommendations to the CEO.
- Introduced a 2-week Scrum cadence, regression testing, quality gates and release governance across a 9-person team, improving delivery predictability.

Product Manager | Speeir Ltd | Athlone, Ireland — Sep 2024 - Jun 2025

- Took TrackHQ, a multi-tenant B2B SaaS platform, from concept to launch on web, iOS and Android as sole product hire, onboarding 16 enterprise studios, 108 trainers and 448 active clients.
- Shipped class and appointment booking with capacity limits, automatic waitlists, cancellation windows and recurring schedules, processing 3,820 bookings across 16 customers.
- Shipped AI features into daily workflows with the user in control, including plan import from documents, voice logging and drafted check-ins, and removed AI plan generation after a pilot showed unreliable outputs.
- Designed usage-based pricing across 6 tiers and 2 currencies and built the LTV:CAC model that redirected go-to-market toward agencies over independents (modelled).

Software Engineer | Mastercard | Dublin, Ireland — Jun 2022 - Jan 2023

- Built event-driven authorization and clearing systems on the NEXUS payment network (Java, Spring Boot, Kafka, REST APIs, Oracle, PostgreSQL) supporting 300+ merchant onboardings with 97% test coverage under PCI and PII controls.

Business Process Executive | Infosys BPM | EE Telecom | Ireland — Jan 2022 - May 2022

- Analysed CRM, onboarding and connectivity workflows for an enterprise telecom account, identifying automation opportunities and driving a 25% increase in throughput with NPS raised to 70%.

EDUCATION

MEng in Engineering Management | Technological University of the Shannon | 2024 | First Class Honours, GPA 79.6%

Modules: Data Analytics (90%), Strategic Management (85%), Quality Management, Financial Statement Analysis

BEng in Software Engineering | Technological University of the Shannon | 2021

CERTIFICATIONS

Professional Scrum Product Owner I (PSPO I) | Scrum.org | March 2026 | Score: 93.8%

SKILLS

Product: Product Strategy, Roadmap Ownership, Backlog Prioritisation, User Stories, Acceptance Criteria, Customer Discovery, Pricing and Packaging, Go-to-market

Delivery: Agile, Scrum, Sprint Planning, UAT, Release Governance, Quality Gates, Risk and Dependency Management, Stakeholder and Executive Reporting

AI and Data: LLM Integration (Claude, OpenAI, Groq, Portkey), Agentic Workflows, Schema-enforced Output, Human-in-the-loop Review, Amplitude, GA4, SQL, Cohort Analysis

Technical: REST APIs, Webhooks, gRPC, Kafka, PostgreSQL, Multi-tenant SaaS, AWS, Docker, CI/CD, Java, TypeScript, Stripe, Jira, Confluence, Figma
